FAX: 651-454-8015

GP Introduces New Pulse Pumps

General Pump has introduced new innovative pulse pumps which permits cleaning solution application at system pressures up to 1500 psi (100906) or 3000 PSI (100152). The General Pump pulse pumps directly mount onto one of the drive pump inlet valve ports by using a special valve and adapter and draws cleaning solution with each stroke of the drive pump. Chemical exits through the high-pressure line and is delivered into the high-pressure discharge line of the drive pump after the pressure unloader valve. These pulse pumps feature corrosion resistant 303 stainless steel construction and NBR diaphragm offers resilience and chemical compatibility. The 100152 pulse pump features an integrated ball valve which allows shut-off when using water pressure up to 3000 PSI. Call or fax for more information. Phone: 888-474-5487 X199 or 651-686-2199. Fax: 800-535-1745.
