

# CERTIFIED®

Recommended by leading Carpet Manufacturers.

## Model "S"

# PILE BRUSH

Used for maintaining heavy traffic lanes and preparing carpet for hot water extraction, and grooming the carpet nap.

The one essential tool for proper carpet care, the Certified® Model "S" Pile Brush removes the deeply embedded dry particulate matter from the carpet while helping groom the nap, eliminate traffic patterns and prolong the life of your carpet and rugs.

#### Why do you need the Certified® Model "S" Pile Brush?

- To help remove traffic pattern areas.
- Breaks ups and removes deeply embedded soil in your carpet.
- Adds life to your commercial or residential carpet.
- Grooms the nap.

#### What makes the Model "S" Pile Brush stand out!

- Dual motor system
- One motor drives a 4" vegetable fiber or nylon brush
- Second drives the vacuum motor.
- Self leveling base
- Sand trap collects the larger particles, allowing just fine dry particulate to pass into paper bag insert.
- Solid construction.

The Building Service Contractors Association International 1998 Carpet Guide says "The pile brush type vacuum will remove deeply embedded soil, and open up a nap more than a regular, lightweight vacuum. Usually, a pile brush machine will be used weekly on traffic lanes, monthly on all of the carpeted areas, and always just before any cleaning process. The pile brush vacuum is a dual-purpose machine because it is used both to maintain commercial carpet and to clean".

# Facts You Should Know About The Certified® Model “S” Pile Brush.

Certified® has pioneered and developed the use of the pile brush longer than any other machine manufacturer. Certified® introduced the first two-motor horizontal Pile Brush unit ever manufactured. It is the opinion of thousands of Certified® Pile Brush users, that no cleaning job is complete or professionally done unless prepared by pile brushing. Skillfully engineered and ruggedly built, only the Certified® Pile Brush offers you these exclusive features:

- **PORTABLE:** The Certified® Pile Brush can be wheeled up a flight of stairs.
- **OPERATION:** Only the Certified® Pile Brush is self-leveling and depth of brushing varies on the same rug conditions and height of pile.
- **TRANSMISSION:** Brush drive is positive and geared to motor to insure continuous brush action even when pile is high or badly matted.
- **MOTOR:** Out in the open away from dust and grit means longer life.
- **VACUUM SYSTEM:** Certified's exclusive sand trap prevents bobby pins, paper clips, carpet tacks or other metallic objects from ruining vacuum fan blades. Only lint and dust reach the blades and refill bag.
- **BRUSH:** Certified® solid spiral brush has gentle grooming action - does not break, cut or pull pile loop. Does not mat and is self-cleaning. Only Certified® permits reversing of brush for longer wear. Also available with tufted nylon brush.

## SPECIFICATIONS

<b>WEIGHT:</b>	67 lbs. (30.4 kilo)
<b>SHIPPING WEIGHT:</b>	80 lbs. (36.3 kilo)
<b>OVERALL WIDTH:</b>	19.25" (48.90 cm)
<b>OVERALL DEPTH:</b>	18" (45.72 cm)
<b>OVERALL HEIGHT:</b>	43.25" (109.86 cm)

<b>HANDLE:</b>	Extra wide 18" (45.72 cm)
<b>SWITCH LEVER:</b>	5" (12.7 cm) plastic coated finger tip control

## HOW TO USE THE MODEL S PILE BRUSH

### STEP ONE:

The Pile Brush is ready for use after removal from carton and adjusting the height of the handle to suit the operator.

### STEP TWO:

To operate most effectively, always start in a corner of the area to be pile brushed facing the lay of the pile. Except for shag carpet, and a few other decorator carpets, all carpet is constructed so that the pile will lay slightly in one direction.

### STEP THREE:

Run the Pile Brush forward one or two steps and pull back over the same area. The Pile Brush action is complete on the back stroke, against the lay of the nap. Turn the unit sharply after completing the backstroke in the direction of the opposite wall, straighten brush when finished, replace inner bag if necessary, and empty sand trap.
