Four stage clean-air filtration

The PF2030 delivers true clean-air filtration down to .3 microns with 98.36% efficiency using a four stage filtration process:

Stage 1: Enclosed within the rotationally molded housing is a disposable paper filter bag. This bag makes disposal and replacement clean and efficient.

Stage 2: For added filtration, a bag-in-bag design, encloses the paper filter within a durable, reusable cloth filter bag.

Stage 3: Each of the two vac motors is fitted with an intake filter for a third stage of filtration.

Stage 4: A high-performance filter cartridge is located at the motor exhaust, ensuring clean-air performance. The combined efficiency of these four stages of filtration delivers clean-air performance that will reward you with cleaner carpets and a healthier environment.

Ergonomically-designed handle with cushioned grips and safety switch are standard.

Handle folds down and the unit can be stood on end for storage.

Tackles large area vacuuming projects with ease. The handle can be adjusted for operator comfort. A 75-foot power cord minimizes interruptions for outlet changes.

Model	Motor	Bag	Agitator	CFM	Cleaning Path	Cord	dB	Weight
