

SNOUT ADAPTER KIT

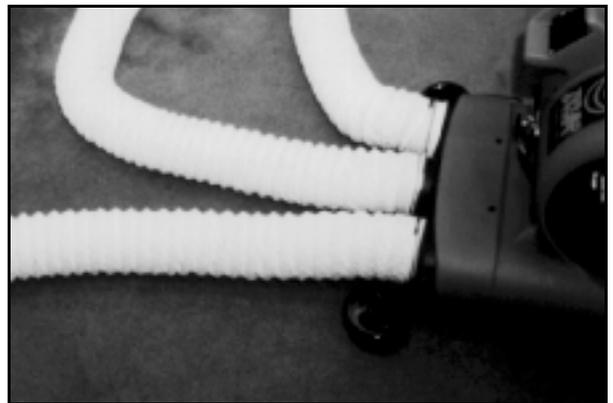

The adapter fits the snout of any Dri-Eaz Sahara TurboDryer, and allows directing air through standard 4-inch ducting.

Clip bungee hooks to the ring portions of the grill. When not using an outlet, cover with vinyl cap and spring clamp.

Hold the snout adapter near the snout of the Sahara TurboDryer. Reach past the adapter, or through an outlet, and fasten the hook at the end of each bungee to the Sahara grill. Be sure to fasten the bungee hook to the ring portion of the grill, which is sturdy because it is secured to the housing, rather than to the end of the grill.

Grasp the bungee outside the snout adapter and pull, applying only enough pressure to hold the assembly securely in position. Do not over-tighten. Secure with the push-button cord lock.

The adapter is made to fit standard 4-inch ducting.
