Model Number: E574

Heater Thermostat Miniature Manual Reset 86201790 Mytee E574 10-0814-A 130-14C
10-0814-B

Manufacturer: Clean Storm

Mini disk thermostat.

Please read this webpage closely!

This unit E573 does not have the reset button in the middle. Set to turn off electricity at 200 degrees on the outside of the heater. This means the water is about 212 degrees on the inside of the heater.

115 volts.

Used in most brands of extractors including Mytee, Ninja, Diamondback, Prochem, Shazaam, PowerFlite, Jamco, TMI, Namco, Chemtex, more...

The part E574 is a push button manual reset breaker set at 302 degrees.

We recommend that if you have a push button resettable thermostat that you replace it with an automatic one. Many machines come with one automatic and one push button.

The machines perform better in the long run if both are automatic.

Please Purchase part E573 instead!

Please note if you order this part, we might fill it with part E573 (yes we might force you to change because the factory should have never installed the push button style in the heater in the first place!)

This means we are not going to field phone calls that we shipped you the wrong thermostat just because you did not read the webpage.

Compare to current or past OEM associations:

Sandia Plastic / Prospector 10-0814-A

Mytee E574

Windsor 86201790

Prochem 8.620-179.0

EDIC G11258

130-14C

Powrflite PX160

10-0814-A

10-0814-B

This requires that the solderless connections be replaced.

Please note it is NOT OK to use 12 volt rated automotive connectors made out of vinyl.

You must use nylon connectors instead rated for 120 volts.

Using the wrong connections can cause your machine to catch on fire!

Fully Nylon-Insulated Female EZ Disconnect 14-16 AWG each 4X299-1
BLUE Solderless Connector 1/4in Wide
