Model Number: QuickNav

Drieaz Delmhorst QuickNav Moisture Meter For Flood Restoration

Manufacturer: Drieaz

Delmhorst QuickNav

The new QuickNav® professional meter incorporates an easy-to-use backlit menu for accessing pin, scan, and thermo-hygrometer modes in a single handheld unit. This 3-in-1 precision instrument instantly calculates dew point, grains per pound, and vapor pressure.

The QuickNav is designed and manufactured by Delmhorst Instrument Co., in New Jersey, established in 1946. "Delmhorst brings decades of moisture meter expertise to the table," said Brandon Burton, Education Manager for Dri-Eaz and Restoration Sciences Academy. "When we approached them about developing a kit focused on the needs of the restoration professional, they knew exactly what we needed."

The QuickNav kit includes the QuickNav meter, carrying case, hammer probe, a short pin electrode, and another Dri-Eaz exclusive: an electrode extension harness used to extend the reach of the meter to check for moisture under cabinets and other hard-to-reach areas.

"We are thrilled to have partnered with Dri-Eaz," notes Paul Laurenzi, Vice-President of Sales and Marketing of Delmhorst Instrument Co. "From the start, it was clear that our combined years of experience in the restoration industry, and the similarities we share as manufacturers, made us a great match. We look forward to jointly providing the restoration industry with high-quality, innovative products and the superior level of customer satisfaction that customers have come to expect from each of our companies."

The QuickNav (F471) is the latest in a full line of Delmhorst meters offered by Dri-Eaz. Models include the new HT-4000 and the HT-3000 thermo-hygrometers, and the BD-2100 pin meter and dual-mode TechCheck Plus Package. Each Delmhorst meter features rugged construction, a sturdy shock-resistant plastic carrying case, a 9V battery, and a 1 year no-hassle warranty.

Delmhorst meters are now available for order through Dri-Eaz distributors, who also sell Delmhorst's hammer probe and baseboard probes as well as a full array of replacement pins, sensors and fittings.

Since 1946, Delmhorst Instrument Co. has been designing and manufacturing high quality moisture meters in their New Jersey plant. Delmhorst's first customers were building superintendents in New York City, who used the devices to help them identify leaks in roofs and plaster walls.

>

Each Delmhorst meter features the following:

- Rugged construction that ensures years of reliable use
- Sturdy shock-resistant plastic carrying case protects meter from damage
- 9V battery
- 1 year no-hassle warranty

Product Features

- Thermohygrometer measures RH, temperature, calculates dew point, GPP, and vapor pressure
- Backlit display, adjustable alarm, reading hold feature
- Correction scales include wood and drywall

Product Specifications

Model

Delmhorst QuickNav

Display

Digital backlit LCD

Power

9V battery

Pin mode detection depth

11⅛ in. with 26-ES Hammer Probe electrode (F467)

>

3/4 in. with 21-E electrode (F468)
Both probes are included with the QuickNav Kit

Pin mode scales and ranges

Temperature: -40-255°F (-40-124°C)
RH: 0-100%
Wood: 5-60% MC
Gypsum (drywall): 0.1-6% MC

Scan mode detection depth

3/4 in.

Scan mode scale

0-300

Accuracy

Temperature:
±1.8°F (-4-158°C)
±1°C (-20-70°C)
RH: ±2% (10-90% RH)
MC in wood:
±0.5% (6-12 MC)
±1% (12-20 MC)
±2% (20-30 MC)
