Model Number: 5000

Electrical Converter 5000 Twin Pack One 3 Wire 30 amp Single 4 Wire - 115 Volt Single Gang Adapter Breakers (2 outlets each)

Manufacturer: Clean Storm

Starter Electrical converter kit for carpet cleaning machines Kit includes both converters:

Clean Storm  
SBM5003A

>

>

Electrical Converter 230 volt 3 prong 30 amp TO 115 volt Single Gang  
Adapter (2 outlets)

You get both:

Mytee  
5003

Mytee: 5003 - 3 prong Single Gang Electrical Converter

and

Mytee  
5004

Mytee: 5004 - 4 Prong Single Gang Electrical Adapter Converter

>

## My Stats Applications:

- Residential Carpet Cleaning
- Residential Tile and Grout Cleaning
- Any Low Amperage Situation

## Specifications:

- Warranty: 1 year components, 5 years housing
- 4 prong kits included in package
- Built in circuit protection
- Avoid blowing circuit breakers on the job site
- Saves time and labor

## Accessories:

Works great with any of our dual cord carpet extractors, such as the M-12 dual mode extractor, or the 1003DX carpet extractor.

>

Package includes one 5003 and one 5004 converter.  
You can use it to plug into a 3 or a 4 prong electric dryer connection.  
Please verify voltage before use with a multimeter!

#### Details:

Are you going to purchase this for your TMI Eclipse, Sandia 80-3500H, Clean Storm 12-3500-HAFAD or some other branded Dual 3 stage heated machine or some other high amp draw portable?

You should know that some other brands of converters use 20 amp breakers and we would get calls from customers that purchase this other brand and stated that they where still tripping breakers. We always had to sell 25 amp breaks to those customers so they could switch the factory breakers out and install these new higher amp draw breakers. We have already done this for you in this model. Why? The first machine in the list above draws a full 20+ amps one at least one of the two power cords if you decide to turn on the heater, vacuum motor, and water pump at the same time. The push button breaker on the pump outlet on this above converter is still going to trip if you leave the standard 20 amp breaker installed. Change the breaker to 25 amps and your problem is solved. On the new Mighty portables, they mark the pump power cord with a yellow ban. This yellow banned cord is the cord you will need to plug into the 25 amp breaker. If you own one of these other branded converters this is a very easy fix and change out. Voids the warranty on the converter but at least you can use it.

How safe is this? Well, used the 25 amp breaker switch out from 20 amp breaker on service trucks for over 10 years. So far the female receptacle and the male plug on the end of the extension cord seam to be the weak link. They do get roasted and have to be changed out about once a year.

>

Please note that it is the users responsibility to test the outbound current before use. Just because it fits does not mean that it is OK to use. Please consider purchasing a Multimeter to test outbound voltage at each new job site. This only takes 30 seconds and might save you from having to replace your plugged in extractor or dehumidifier. It is the users responsibility to make sure that you do not overload the amp draw. Please know your equipment! For example if I am plugging in lots of dehumidifiers into this unit, standard electrical code states for long term use, do not exceed 80% capacity. This means that the max amp draw from this box if I am running my appliance that more than just a few hours should be 16 amps per receptacle.

Blending the power of your two power corded portable carpet cleaning machine.

230 Volt to 115 Volt Electrical Adapter

Plug into standard residential electric dryer or commercial coffee plug to covert electricity into 2 separate 20 amp circuits. Available in 3 and 4 prong configurations. Great for running four dehumidifiers, or a high amp drawing extractor that use to require multiple circuits, or even electric pressure washers. This unit is small, lightweight, durable, and affordable.

Box is made out of high impact Polypropalane and will never rust, chip, or peel. The cover is made out of Nylon.

If you are ordering from this item we will assume you do not want the GFCI or overload protection and the unit will acmonidated the 30 amp 4 prong configuration.
