Electrical Converter 230 volt 4 wire 30 amp 14-30P TO 115 volt 4 Gang GFCI Adapter 20151202

Manufacturer: Clean Storm

230 volt 30amp 4 wire to 120 volt Electric Converter has 8 GFCI outlets with Breakers

Temporary power distribution box
Construction spider box
This converter is perfect for the water damage technician. Just pull the pot/pans storage drawer forward that is located under the electric oven in the kitchen. Lift the drawer off its tracks and you will find a 50 amp 220 volt 3 prong female outlet. (4 prong available) Unplug the stove and plug in your converter. This converter has a total of eight 110 volt female ground fault receptacles! Each pair of receptacles are protected with a built in push button resetable 20 amp circuit breaker. This ultra compact design is you answer to installing the number of air movers and dehumidifiers in the home without the worry about tripping breakers in the rest of the home. You can safely use up to 80 amps of total power from this one converter. Most restoration contractors use this device to run the dehumidifiers, and use the customers regular wall outlets to run the air movers. (remember dehumidifier placement is not relevant to drying productivity as long as the blower motor on the AC/Heating system is turned to the 'On' position.) Just think, no more lost rental because the home does not have enough 'juice' to do the job right. This converter can also be used to operate other high amp drawing industrial equipment, like pressure washers and multi-corded carpet cleaning machines. Range cable is 4 feet long and the ground wire is 10 feet long. Weight 6 lbs.

Please allow 3 or 4 week for the build.
