Blade Shaft Belt Replacement and Maintenance
A worn or damaged blade shaft drive belt can cause reduced cutting performance, belt slippage, excessive vibration, or loss of power transmission to the saw blade. During routine maintenance, inspect the drive belt for:

- Cracking, splitting, or deterioration of the belt ribs

- Fraying or excessive wear along the belt edges
- Glazing, slipping, or unusual belt noise
- Uneven wear caused by pulley misalignment
- Damage from excessive heat or improper belt tension

When replacing the belt, inspect the pulleys and associated drive components. Follow the equipment manufacturer's service instructions for belt installation, alignment, and tension adjustment.
Additional Product Information
This listing is for the Husqvarna 588768901 blade shaft drive belt, which supersedes the earlier Husqvarna 504068301 part number.
The 16PK765 designation identifies the belt's multi-rib profile, 16-rib configuration, and nominal 765 mm length.
