Hot to reset my vacuum gauge to zero:
To reset to zero inches of lift, raise rubber top stopper and blow into the back 1/4 Mip connection. (usually with a rubber tipped blow gun off an air compressor)
Then reset rubber stopper.
Please note gauges are usually not freeze thaw stable. Please part an electric space heater on a low heat setting if needed to protect equipment.

Legend Brands 106840 Vacuum Gauge 26-044 0-30hg Stainless Steel 1/4in Back Mount 2.5in Hole Direct Original Equipment Part

Exact look is subject to change based on manufactured design, including and not limited to the font used on the display sticker but will still function the same.

Many times a vacuum gauge will not be on zero once received and you will have to acclimate to your elevation (see above.)

Optional Generic Version:
