Video

Description
The Blastrac 1-15DS walk-behind blast-cleaning machine offers a high level of versatility and its heavy duty blasting ability makes it optimal for large sized surface preparation applications. It is ideal for cleaning and preparing surfaces such as concrete and asphalt before the application of a new coating. It can also be used to prepare steel surfaces. The Blastrac 1-15DS is equipped with its own height adjusting system for easy transportation. The drive motor for self-propelled operation helps maintain speed on ramps and inclines.
Features

• The shot blasting machine has to be connected to a Husqvarna industrial dust collector to create a closed circut. This means that you are able to work virtually dust free, creating a better work environment.

• This machine is equipped with a driver motor for ease of use. It also improves productivity and promotes a more even and consistent blast pattern and surface profile.

• The shot blasting machine is equipped with a dust hose holder making operation more efficient while blasting.

• This self-propelled shot blasting machine features drive controls on the steering handle.

• Reusing the abrasives makes this a resource-smart solution. Also no water is used and wasted and no chemicals are used during the blasting process.

• Longer lifetime on the blast housing due to pressed liner system.
