Description
BMP 4000RC is a heavy duty remote controlled milling and sawing (shaving) machine ideally suited for large-sized milling and sawing applications, for example road construction and industrial flooring. BMP 4000RC is a multifunctional machine. By changing the hydraulic motor you can easily swap the milling and the sawing technology. It has a double, hydraulic micrometric adjustment to set the working depth, to work very precisely and eliminate the risk of underground deterioration. Due to its increased weight, it allows you to generate more efficient and precise sawing and milling actions.
Features

• Both hydraulic cylinders have a depth sensor indicator for precise height adjustment while working. In addition, a display gives information on height adjustment and other relevant data.

• This machine can be equipped with a laser system that keeps the machine levelled automatically. It also tracks the gradient of the flooring on a user friendly screen.

• This machine is equipped with a large dust hose connection of 150 mm diameter for minimised dust exposure on the site.

• This machine is a remote-controlled scarifier made for the toughest scarifying applications.
