Description
The US Products Pegasus Pro 500H is a heated commercial carpet extractor (model 05-10037) built for professional carpet cleaning contractors. The integrated on-board heater maintains solution temperature during cleaning, which improves soil suspension in heavily soiled commercial carpet. The dual vacuum system provides the water lift needed for moisture recovery and reduced dry times after extraction.

Heat is a key variable in carpet extraction chemistry. Most cleaning solutions are formulated to work at elevated temperatures — IICRC S100 recommendations indicate that heated water generally improves soil suspension, emulsification of oils, and dye release in fiber. The Pegasus Pro 500H's on-board heater maintains solution temperature from the tank through the spray jet, eliminating the temperature loss that occurs when a non-heated extractor cools the solution between the tank and the spray head on long hose runs. This is relevant in commercial jobs where multiple rooms are cleaned in a single session and solution temperature consistency affects cleaning uniformity across the job. As a machine-only listing, the 05-10037 requires a compatible wand and hose set for operation — see the Pegasus 1200 with Revolver Hard Surface Tool and 25-foot hose set (05-10036-P) or contact US Products for the Pegasus Pro wand compatibility.
