Clean Storm 20121203U, Used DriStorm Dehumidifier Control Panel Circuit Board For Humidistat Models, 2 in Stock
Replacement control panel, circuit board, and humidistat assembly for select DriStorm commercial dehumidifiers.
Important Used-Part Notice:
This is a used electrical component removed from a DriStorm dehumidifier that was taken out of service because of a refrigerant-system leak. Cosmetic wear, dust, scratches, label wear, or other signs of previous installation may be present.
Product Overview
This replacement control panel assembly is intended for DriStorm dehumidifiers equipped with the humidistat-style control system. It may be used to replace a damaged or nonresponsive control panel in compatible DriStorm 134H, 184H, and 239H dehumidifiers.
Purchasing this used assembly may provide substantial savings compared with ordering the new special-order version.

Verify Before Ordering
DriStorm dehumidifiers may have been manufactured with different wiring, connectors, control systems, or production revisions. Compare the photographs, wire connections, connector locations, mounting points, and original component before placing your order.
Before Replacing the Control Board
A blank, dead, or nonresponsive control panel does not always mean that the circuit board has failed. Before purchasing or installing a replacement board:

- Disconnect the dehumidifier from electrical power.
- Inspect and test the fuse located beneath the control panel.
- Inspect wiring connections for loose, burned, corroded, or damaged terminals.
- Check the power cord, switches, and incoming voltage.
- Compare the replacement board and connectors with the original assembly.
- Refer to the DriStorm service manual for diagnostic procedures.

Electrical troubleshooting and installation should be performed by a qualified service technician. Disconnect the machine from power before opening the cabinet or handling electrical components.
What Is Included?

- One used DriStorm control panel/circuit board assembly
- Only the components shown in the product photographs

Dehumidifier, cabinet, compressor, sensors, wiring harnesses, mounting hardware, and other repair parts are not included unless they are visibly attached and shown in the product photographs.
Used-Part Condition
This component was removed from previously operated equipment. Used electrical parts may show normal cosmetic wear, including scratches, dust, discoloration, tool marks, worn labels, or evidence of prior mounting.
The appearance of the item received may vary slightly from the photographs.

Used Electrical Parts Are Final Sale
Verify that part number 20121203U, the connector arrangement, and the application match your machine before ordering. Electrical parts can be damaged by defective wiring, incorrect voltage, short circuits, moisture, failed sensors, or another unresolved machine problem.
Frequently Asked Questions
Is this a new control panel?
No. This listing is for a used replacement control panel and circuit board assembly.
Why was the original dehumidifier taken out of service?
The donor dehumidifier was taken out of service because its sealed refrigerant system had leaked. This listing is only for the control assembly removed from that machine.
Will this fit every DriStorm dehumidifier?
No. It is identified for DriStorm 134H, 184H, and 239H humidistat-style models. Other models or production revisions may use a different control system.
Should I replace the board if the display is blank?
Not automatically. First inspect and test the fuse beneath the control panel, incoming power, wiring, connectors, and related electrical components.
Does this include the entire dehumidifier?
No. This listing is for the used control panel/circuit board assembly only.
Can installing this board correct every control problem?
No. A control problem may also be caused by a fuse, power supply, damaged wiring, sensor, switch, connector, incorrect voltage, moisture damage, or another component. Proper diagnosis is recommended before ordering.
Ordering Checklist

- Confirm the dehumidifier model number.
- Confirm the machine uses the humidistat-style control panel.
- Compare all plugs and wire connections.
- Compare the mounting locations and overall dimensions.
- Inspect and test the fuse under the existing control panel.
- Correct any underlying electrical problem before installing another board.

Display images are for reference. Product appearance may vary because this is a used component. All purchases are fulfilled according to the part number ordered. Specifications, compatibility information, and availability are subject to change without notice.
