The Sutorbilt blower operates by trapping air with two "figure eight" impellers rotating in opposite directions. This entrapment occurs four times per revolution and efficiently creates pressure and volume for your aeration system.

The Sutorbilt Legend Series features machined cast iron construction of the housing and impellers. Impellers are dynamically balanced to operate without vibration and are permanently fastened to steel shafts. Shaft rotation can be in either direction. To change the inlet/discharge orientation of the blower simply reverse the rotation of the drive motor.

Anti-friction bearings are used throughout. Timing gears and gear end bearings are splash oil lubricated from an oil-tight housing enclosing the timing gears. Drive end bearings are grease lubricated through fittings. High temperature Viton lip type seals prevent the oil and grease from entering the impeller chamber to prevent contamination in your system. Machines are shipped without oil. Do not operate before reading the operation manual and adding lubricant.
