Model Number: AB10

Tamping and Spotting Brush AB10

Manufacturer: HydroForce

Hydroforce AB10 Wood Handle Tamping and Spotting Brush 109633
Description
The Spotting Brush has nylon bristles to give extra stiffness and long life, and is a required part of any professional spotting kit. The brush is best used by tamping rather than scrubbing the soiled area. A tamping brush is used two ways. One is the wooden handle has a sharp chiseled shape to it to assist in the removal of thicker spills and transfer them into a clean towel. The second is to apply your spotter and slap the stain with the white bristles. This brush is not to be used in a side to side motion. You will find that slapping or tamping the stain will not fray the fabric yet offers aggressive removal.
