To install simply screw the outer sleeve counter clockwise over end of hose.
Then insert nipple down into the hose and secure clockwise.

Helpful notes:

When installing the outer sleeve over hose do not over tighten. If you do this causes the hose end to be pinched and you will not be able to insert the nipple down into the middle of the hose.

Hold outer sleeve in vice while you tighten the insert into the hose.

Lubricate the insert with oil to help assist with the tightening.
