PA Pulsar Easy Start Valve 3/8 Mip 8.709-867.0 - 339006 [87098670]

Manufacturer: Karcher Pressure Washing

PA Pulsar Easy Start Valve, 3/8" MPT Pipe - 8.709-867.0 - Legacy Shark
The easy start valve allows relief of system pressure when starting a gasoline engine. The easy start valve is a low pressure bypass or relief valve, which directs water into bypass until a certain pressure is reached. Since water is directed to bypass in low pressure, the load on the pump, and consequently, the engine is less than the normal operating load and engine starting is eased. This valve can be especially useful in systems with larger gasoline engines, such as 8 hp or larger. The valve consists of an inlet fitting, a valve ball and spring, a valve seat, and an outlet fitting equipped with a low pressure hose barb. The inlet fitting has a hole drilled through it with a substantially smaller diameter than the inlet line. Used to help start pressure washing pumps by releasing water pressure under 150 psi out the 1/4" barbed port.

SPECIFICATIONS:

Maximum Flow: 7.8 GPM
Maximum Pressure: 3200 PSI
Inlet: 3/8" MPT
1/4" hose barb (8 mm)
176 degree F rated
