HydraMaster 000-169-235 Water Box Float Valve
#1 in the drawing
Description
Note this part number has change over the years. Used to be 3/4" male pipe thread with a build on float and a short rod. Now this part number is just for the float valve, no rod and not float.
The line drawing image is a 1/2" pipe connection that was drilled and tapped to accept a 3/8" Male elbow to be screwed inside of it.
Double threaded floats 1/2" Mip outside X 3/8" Fip inside.
The line drawing unit is made out of a cast brass piece and does not come with a float or rod attached.

One of the things you will notice: Same part number is used on both machines but the part is different from the thumb nail.
Thumb nail image includes the float and arm. The bottom photo is just for the float without the arm.
