125c /257F over temp protection

10" leads

7.5 amps

120 volts

84" Lift

151 CFM

12,684 vacuum units.

Massive Extra Long Life Carbon Brushes 1300+ Hours

Peripheral Bypass

5.7" Diameter

1 stage

Super easy 10 minute vacuum motor change out, only 8 screws to remove the back cover and the motor is secured with 4 springs.

Safety adds 30-50 degrees of heat and lowers the RH.

>

Factory Installed
Admiral Water Temperature Gauge 50-300 degrees F Dial 2-1/4in 1/4in Mip
Connection 78121560
0-300 degree thermometer displays the temperature of the pressurized air.

Once you know the temperature and RH in the room as well as the new warmer temperature traveling in the wall, you will be able to calculate the new RH used to dry out inside the walls.

If you start a job at 70 degrees F @ 50% Rh and then use that same air to raise the temperature to 120 degree F, the Rh drops to 10%. This make the air hold more moisture so drying happens faster. .

If you install dehumidifiers and the air is lowered to 35% Rh and then your raise the temperature to 120 degrees F, the Rh drops to 9%.

Factory Installed
Clean Storm 120 Volt Hour Meter Panel Mount SBM3AE11
Keep track of when 1300 Hours is up and it is time to change the vacuum motor carbon brushes.

Factory Installed
Clean Storm Panel Mount 15 amp push button resettable breakers PP140624
PP33-900236 PHY018-003 [420815]
Breaker monitors both the GFCI outlet and the vacuum motor.

Caution: It is important to not overload the electric power circuits in the building that you are placing the equipment. Just because it plugs into an outlet does not mean it is OK to that outlet. It is the responsibility of the user to confirm that the power can support the equipment.

>

Description

25 ft 14-3 Power Cord with Nema 5-15 Glow plug
2" Barbed Suction Port with Vacuum Motor filter
2" Barbed warm Air Blow Port with Gate Valve
27 Half Inch OD tubing ports (same as 3/8" ID Tubing)
Rubber feet on bottom to protect floors.
Build in small parts storage cup and lid.
Dual heavy duty lift grips also double as power cord wrap.
Size: 13-1/2"W X 18-1/2"L X 9-1/4"H
Weight: 20 lbs

System Advantages:

Quad protection vacuum motor:
15 amp breaker, GFCI, 275 Degree F shut down, and Hour Meter Monitoring.
Largest, hardest blowing vacuum motor.
No need to leaving tubing on machine when they are not needed.
Vacuum motor last 130% longer before needing carbon brushes.
Can be expanded to the next room.
Can use all existing accessories from all other manufactures and suppliers.
Vacuum motor can be changed out in less than 10 minutes.
Can be used to push or pull on the air.
Works with all brands of 1/2" OD (3/8" ID tubing) or even 3/8" OD (1/4" ID) tubing with optional fittings.
Daisy chainable.
2 units can operate on a 20 amp breaker.
Allows for the building materials to be dried without removal.
Pushes 120 degree F air into hard to reach areas.

Features:

Can operate and push through thirty 1/2" holes (40 liner feet of wall with 16" studs even more with 24" studs),
OR sixty 3/8" hole (80 liner feet of wall),
OR one hundred twenty three 1/4" holes (164 liner feet of wall)!
Can be used with all other brands of wall drying accessories!
Xactimate WRT-WALL Rents for \$190 per day.
Don't forget to add for setup though & WTR-EQ for labor 2 to 4 hours

Sold machine and 300 ft of tubing only. See below for optional accessories.

Caution: Do not suck up water into the vacuum motor. Motor is rated for humidity but not water.

Can be with the following Xactimate WRT-Wall pieces of equipment and accessories!

>

Works with all your existing tubing, hoses, mats and accessories from
Drieaz F211-BU Driforce Inter Air Drying System Base Unit

Works with all your existing tubing, hoses, mats and accessories from
Drieaz F211 Driforce Inter Air Drying System

Tips: 1. When removing baseboard, score top edge with blade. Always place a large putty knife or sheet rock mud applicator on the wall to help prevent the pry bar from leaving dents in the soft wet wall. Once baseboard is removed, from the back side, take channel lock piers and grab the nails and pull / roll the nail all the way through the wood. Mark both the lower wall and back baseboard with a number/letter with permanent marker. Lay paint side down. Determine if you want to drill 1/2" holes, 3/8" holes, or 1/4" holes into the wet surface depending on the accessories at hand every 16" apart below the cove base/base board top edge but above the sill plate stud. Drill a 1/16" hole near the ceiling every 16" to let the water vapor out of the wall cavity. Once the area is dry you simply re-attach the baseboard/cove base. Caulk the top of the baseboards, caulk the nail marks caused by affixing the baseboard to the wall, as well as the 1/16" top vent hole. Paint as needed.

>

2. The in and outbound air hose connection is 2" barbed so it already works with all the Drieaz branded accessories but the Injectidry uses 1-1/2" barbed connection you might need to consider an AH46 expanded hose cuff. These enlarger cuffs screw over the outside of 1.5" ID vacuum hose and enlarge to slip over 2" barbed connections.

Optional:

DriStorm WRTWall Extension Tee Fitting 20180703
Expand your system.

Plastic Push in Tubing Reducer 1/2 in Plastic Stem X 3/8 OD Tubing 20514P
Reduce the hose diameter to 1/4" ID X 3/8" OD
