Clean Storm 20190917, Standpipe Waste Tank Link Filter, 2in PVC Slip Fit for Carpet Cleaners

Model Number: 20190917

Clean Storm 20190917, Standpipe Waste Tank Link Filter, 2in PVC Slip Fit for Carpet Cleaners

Manufacturer: Clean Storm

Clean Storm 20190917, Standpipe Waste Tank Link Filter, 2in PVC Slip Fit for Carpet Cleaners

Description

Clean Storm 20190917 2-inch male slip standpipe waste tank link filter protects carpet cleaning machine vacuum systems by intercepting debris before it reaches the pump motor box. Designed for 2" ID PVC travel lines, this durable filter optimizes waste management in truckmounts and extractors.

Features

- Precision-molded 2-inch male slip connection engineered for secure friction-fit installation inside standard 2" ID PVC standpipe travel lines.
- High-flow filtration design prevents hair, lint, and large particulate debris from entering vacuum motors and waste tanks.
- Rugged, chemical-resistant polymer construction built to withstand harsh extraction chemicals and elevated recovery temperatures.
- Optional mesh compatibility allows technicians to slip nylon window screening over the body for ultra-fine lint and hair trapping.
- Streamlined structural profile maintains optimal vacuum airflow CFM without causing excessive suction drop or restriction.

Applications

- Carpet cleaning truckmount vacuum waste tanks and recovery recovery systems
- Portable carpet extractors utilizing 2-inch PVC internal plumbing and standpipe setups
- Tile and grout hard surface cleaning machines with integrated recovery tanks
- Industrial fluid recovery tanks requiring inline particulate and lint deflection

Specifications

Brand
Clean Storm

Model / Part Number
20190917

Product Type

Parts & Accessories > Filters > Strainer and Lint Filters Wet Environment > Clean Storm 20190917,
Standpipe Waste Tank Link Filter, 2in PVC Slip Fit for Carpet Cleaners

Clean Storm 20190917, Standpipe Waste Tank Link Filter, 2in PVC Slip Fit for Carpet Cleaners

Standpipe Waste Tank Link Filter

Connection Type
2" Male Slip / Slip-Fit

Compatible Pipe Size
2" Inner Diameter (ID) PVC Pipe

Primary Material
High-Impact Durable Polymer

Finish
Smooth Industrial Molded Finish

Customization Option
Compatible with aftermarket nylon window screen wrapping

Application Environment
Commercial and portable carpet cleaning equipment

Cross-Reference SKUs

Carpet Cleaner Waste Tank Link Filter

Tips and Additional Information

For optimal performance during installation, ensure the 2-inch PVC slip connection is clean and free of old adhesive or debris before seating the filter. While designed as a snug friction fit, a small amount of removable PVC-safe sealant or tape can be utilized if vibration causes displacement during transport. When dealing with heavily soiled commercial carpets, wrapping the filter body in clean nylon window screen material significantly boosts fine-lint capture and simplifies tank cleanup. Always inspect the filter regularly during routine maintenance to prevent airflow restriction.

Frequently Asked Questions

Q: What size PVC pipe does this filter fit?

A: This filter is specifically engineered to slip inside standard 2-inch Inner Diameter (ID) PVC tubing commonly found in truckmounts and portable extractors.

Q: Can I use this filter with a mesh screen for finer debris?

A: Yes. The body can optionally be covered with nylon window screen material to provide an additional layer of fine lint and hair protection.

Q: How does this component install into the system?

A: It features a direct 2-inch male slip design that drops or slides right into the 2" ID PVC travel line running from the vacuum and pump motor box up to the waste tank.

Warranty & Safety Information

Clean Storm components are backed by a standard manufacturer warranty covering defects in materials and workmanship under normal commercial use. Warranty coverage is immediately voided if the product is subjected to unauthorized structural modifications, chemical exposure outside of standard carpet cleaning detergents, physical damage from improper installation, or operating conditions exceeding thermal and mechanical limits. Always power down and disconnect your extraction system before performing routine maintenance, filter inspections, or tank servicing.
