Model Number: 580990201

Husqvarna 580990201, Hiperhard Densifier, 55 Gal / 200 Liter, with Potassium Silicate, 580 99 02-01, GTIN 805544808316

Manufacturer: Husqvarna Equipment

Husqvarna Hiperhard Densifier 55 Gal with Potassium Silicate 580990201

Hiperhard

Hiperhard is our most popular and commonly used densifier. Hiperhard contains potassium silicate. It is optimal for porous floors thanks to its ability to better and faster fill out larger voids and pores. This also makes it optimal for the first application on any new project, where surface is still a bit rough and absorption therefore is high.

- Hyperhard Floor Hardening System Is Applied To The Concrete Surface To React With The Calcium Hydroxide (Free Lime) To Produce Calcium Silicate, Which Has A Crystalline/Glassy Structure. This Increases The Surface Tension Of The Concrete Allowing It To Be Polished Economically.
- Approximate Coverage Is 300 SQ.FT. Per Gal.

FEATURES

- Drastically increases the hardness of polished concrete
- Improves abrasion resistance
- Enhances the final look of the polished concrete floor
