Husqvarna W 70 P Wet Vacuum Dust Slurry Automatic Pump Out W70P 967664701 120V Freight Included Price Match 1Yr Warranty

Manufacturer: Husqvarna Equipment

Husqvarna W 70 P Wet Vacuum Dust Slurry Automatic Pump Out W70P 967664701 120V

W 70 P is a powerful industrial wet and slurry vacuum designed for the toughest jobs. This is achieved by using high quality stainless steel components and a special combination of filter and float that protects the motor. Where most wet vacs can only handle water, W 70 P can deal with liquids such as concrete slurry, oils and machining coolants. Recommended for concrete drilling, sawing, grinding and wall/wire sawing. Ingenious solutions make W 70 P easy to work with. Pumping out can take place at the same time as suction. Emptying is carried out via a large bottom valve for simple cleaning. The non-marking wheels are puncture-free and lock at the front.

70 liter / 18 gallon vacuum tank.

Ships on a skid/ pallet. Husqvarna did not want to double box this item to ship small package ground. Customer responsible for all shipping surcharges, including and not limited to, limited access/ home delivery fee, Lift gate fee when no forklift on site, call for a delivery appointment fee, missed or re-delivery fee, etc.

One year factory parts warranty.

Notes: In Jan 2020 the warranty was reduced from 2 years to 1 year. This why you will see some other website post 2 year warranty but this is not correct. You will also see other website post this is a 10 amp vacuum. This too is not correct. The same 8

>

amp vacuum motor that is installed in the W70 non auto pump out vacuum is installed in the W70P Pump out vacuum. The additional amps is for the water pump. The owners manual states this unit is 18 amp. I have to tell you this too is a misprint as the auto pump out is usually only 3.5 amps. It might be possible that if you turn on the vacuum and pump out at the exact same time and surge both you might spike to 18 amps for 1 second. The continuous run amps is rated at 10 amps with the vacuum hose installed, floor wand in use, and auto pump out on. You will also see other websites post this is a 15 gallon vacuum tank. Use capacity is actually only 9 gallons because you are not suppose to let it fill up more than 50%. 70 liters is 18.49 gallons. Maybe they figure the upper filters are taking up 3.5 gallons of space... Who knows.
