Diamonds, the hardest mineral known to man, are formed during extreme high pressure over a long period of time. Few diamonds are worthy of the FL designation – indicating flawless structure and clarity. HTC's FL Series provides the ultimate clarity and sheen for the Superfloor process – making them the only diamond series worthy of the prestigious reference. Aggressive cutting allows for full refinement providing faster and better results of each step of the series.

To simplify the Superfloor process, grit sizes and sequencing has been removed in lieu of a simple numbering system 3-10, 3 being the more aggressive and 10 the ultimate refining tool.

HTC's FL Series steps 3, 4 and 5 are aggressive and can either be transitional tooling or first cut tools for new projects. Steps 6 and 7 are excellent honing tools preparing the surface for clear reflectivity and high sheen created with steps 8, 9 and 10.

Estimated Coverage Rate (life of the tool): 2,500 sq ft per set

Dimensions 2 × 1 × 0.5 in
